

Ungraded assignment: OSC account setup

Week 1 (deadline: Sun Aug 30, 5 pm)

Jelmer Poelstra

poelstra.1@osu.edu

2026-08-22

Before you start

By **5 pm on Sun Aug 30**, you should make sure that you have access to the Ohio Supercomputer Center (OSC), and the OSC Project for this course ([PAS2880](#)).

You will do much of your work during this course by connecting to the Ohio Supercomputer Center (OSC), starting during next Monday's class.

To access OSC, you will need to have an account. This course has its own OSC "Project", and membership of this specific project will allow you to access our shared files and to reserve computing resources.

What you should do

If you already have an OSC account

1. You should have received an email from OSC that you were added to OSC Project [PAS2880](#). If you haven't received this email, please contact Jelmer.
2. Check that you can log in to OSC at <https://ondemand.osc.edu> using your username and password.

If you don't have an OSC account yet

1. You should have received an email from OSC that you were added to OSC Project [PAS2880](#), with a link to create an account. Follow the instructions in the email to create your account.

Tip

At some point during the course, you'll have to actually type your password in a context where you won't be able to see what you are typing. We therefore recommend a password that is not extremely complicated or long.

2. Check that you can log in to OSC at <https://ondemand.osc.edu> using your username and password (it may take up to half an hour after you create your account for this to work).

i Note

If you have any questions about this or run into problems, don't hesitate to contact Jelmer.

OSC project access request approved

To: Poelstra, Jelmer

Today at 10:55 AM

Ohio Supercomputer Center

Dear Jelmer Poelstra,

Your OSC account, jelmer has been added to OSC project PAS3454, Workshop on genAI for omics data analysis.

Note: please allow up to 20 minutes for this change to take effect.

You can connect to our resources using a couple of methods:

1. [OnDemand](#)
2. [SSH/SFTP Client](#) - will require local software installations

Find more information on our [Getting Started Webpages](#) and [new user resource guide](#).
